ALTERNATIVE HANDLE CUSTOM KITS

lock + bolt morticing

MORTICE LOCKS:

Woodworkers provide a service to machine out lock pockets and flush bolt routings to suit our hardware only. Price does not include installation of the hardware but does cover the trenching for the lock body and plate as shown but NOT for the striker plate, cylinder or spindle holes which need to be done on site by others. This permits flexibility for both single and double sided hardware to be fitted on site to suit the application. When Woodworkers hardware is ordered a discount applies to the morticing as a package

FLUSH BOLTS:

Flush bolt routing is for Woodworkers own keyed or non keyed flush bolts only and does NOT include striker plate checkout and the installation of the flush bolts which is done on site by others

door lock preparation & installation video

woodworkers **door lock guide**

ROLLER LOCKS

Roller locks restrain a door with a spring mounted roller shaped latch rather than a conventional wedge type latch that requires mechanical retraction. This allows the use of presentation pull handles (as no knob or lever is required) giving a contemporary uncluttered look. Like other locks there is an independent dead bolt to totally lock the door when required. Roller locks are available only with euro cylinder mechanisms and can be used in rebated door or single door applications.

EURO LATCH LOCKS

These are high security locks used on external doors suitable for modern euro cylinders. You can choose either a double-ended cylinder (where a key can be used from either end) or a thumb-turn cylinder (key for outside, thumb turn inside). They are morticed into the door stile so the lock mechanism is concealed from view. Euro cylinders can be masterkeyed as necessary to allow different access levels.

REBATED LATCH LOCKS

These are used when you have one door closing into another door, which is traditionally done on French Doors and Double Entry Doors. Rebated locks have a 13mm rebate in the face plate and strike and are available in Euro Lock, Skeleton Key Lock or you can use a Rebate Kit on a Tube Latch.

SLIDING LOCKS

Sliding or Parrot's Beak Locks are locks with claw hooks to grab onto the opposing striker plate to secure a sliding door. They can have flat or half moon faces (known as astragal) and can be used internally or externally with either euro cylinder or skeleton key operation.

SKELETON KEY LOCKS

These can be 5 Lever High Security Locks, to be used on external doors, or 3 Lever Low Security Locks to be used on internal doors. The difference between 5 Lever and 3 Lever Locks is the number of different key combinations available. These locks are supplied with a "skeleton" key. The main difference is that the 3 and 5 Lever Locks are more "traditional" for period homes but they cannot be master keyed.

RIM LOCKS

These are low security locks that screw to the outer surface of the door (as opposed to a mortice lock, which is "morticed" into the door). Rim Locks require knobs with a threaded spindle, where the knob screws onto the threaded spindle and is secured by grub screws. Rim Locks are suitable for inward opening doors only and are not suitable for rebated doors. They are also known as carpenter's locks.

DEADBOLTS

Deadbolts are part of most other lock varieties and are the bolt that locks the door, designed in conjunction with latch or roller mechanisms that restrain the door but don't lock it. Deadbolts are also available as separate mortice or surface mounted units for supplementary security.

DEADLATCHES

These latches can be retracted by a key from either side or a knob or lever from the inside only. They can be either rim or mortice locks.

TUBE LATCHES

This is used when the door doesn't need to be locked. It can be used with any type of lever or knob door furniture. Latch simply means you need a Tube Latch to make your door furniture functional.

PRIVACY LATCH

These latches can be used on Bedroom or Bathroom Doors. They have a thumb turn on one side and a safety release on the other side of the tubelatch.

CYLINDER LOCKS

Quick fit cylinder locks integrate the handle and lock into a single unit that can be master keyed and is easily fitted with only two drilled holes being required. They are available with knob or lever action and have variations for external and internal applications including privacy, keyed and non-keyed situations.

EASY FIT DEAD BOLTS

These are the simplest deadbolt to fix requiring two drilled holes and a surface mounted lock. They are available for single and double door applications.

ELECTRONIC + KEYLESS LOCKS

Smart locks have become popular because of the ease of installation and the amount of control it gives the owner. These locks don't need to be hardwired as they have batteries and can connect directly, or through a hub or bridge to your home WiFi. Depending on the model chosen you can control the lock via keypad, smartphone, tag, fingerprint or mechanical key. Smart locks can allow for remote locking and unlocking as well as over 100 permanent or time-controlled access codes. Mechanical keyless locks still have their place where WiFi or electricity isn't available.
